

After Easter Sale of Tailored Suits

Easter buying is now over, but the spring season is hardly begun. For next week we have added 100 suits to the big suit specials that created so much enthusiasm last week. In addition, we have arranged another special at a lower price range.

The three special lots of suits we offer next week are, beyond a doubt, the best values that you can possibly find. In fabrics there is everything, in silk and woolen, that is being worn this season. The color range includes all the fashionable shades of the season. The tailoring is of the usual White House quality—in other words, the best obtainable. We also want to remind you that we are just as particular about perfect-fitting garments as customers themselves.

When considering these reductions, remember that these suits are not a special purchase or job lot bought for sale purposes, but are our regular high class garments. The difference in price between the three lots is simply a matter of difference in material. See these suit values, without fail.

SILK PETTICOATS.

Another item of interest for next week is a sale of Silk Petticoats. These are high grade Silk Petticoats in all colors to match the new suit or dress. These petticoats are a regular 45 grade, special next week at

Spring Jewelry

This date plays a most important part with my ladies' jewels. The Spring is the time for the creation of all that is new and beautiful in jewelry, the art that is most likened to nature of any that is created by man.

Our reputation for the origin of things that are new and correct will be more convincing than ever before.

The lace, hat, waist, belt, collar and hair pins must be supplied in jewelry that is correct, to make your spring gown complete. These articles we have at popular prices.

ALL STEEL IS GIVEN A TEST

If It Twists, It Is Good; If Not, to the Scrap Heap It Goes.

In Missouri, there is a sure test for mushrooms, to distinguish them from the garden variety of toad stools. The test is simple—eat one and if it does not kill the person conducting test, there can be no doubt about it being a mushroom. The same test is applied to the steel which is used in reinforcing the concrete buildings now being built in El Paso.

When the steel is turned out of the mills it is in straight bars and does not have the fancy stick candy effect that it has when put into the framework of the building as the skeleton of the structure. After the steel has chilled, it is twisted by powerful machines while cold. This is the test. If the steel is of the required tensile strength, it twists without breaking. Should it fall below the required test, it splits under the strain of the twisting and is thrown in the scrap heap. If it twists it is reinforcing steel; if it breaks it is scrap.
